Melon Guan

Head of Delivery
#1 Bank in Hong Kong

**Massive Breakthrough,
Cost Down, and Speed
Up: Pioneering with AI-
driven Agile Delivery**

In today's global banking landscape, I face off challenges like never before – large-scale programs, diverse teams across different time zones, and varied practices. But at Global Bank, we've been pioneering AI-driven Agile Delivery, and I'm excited to share our incredible journey with you!

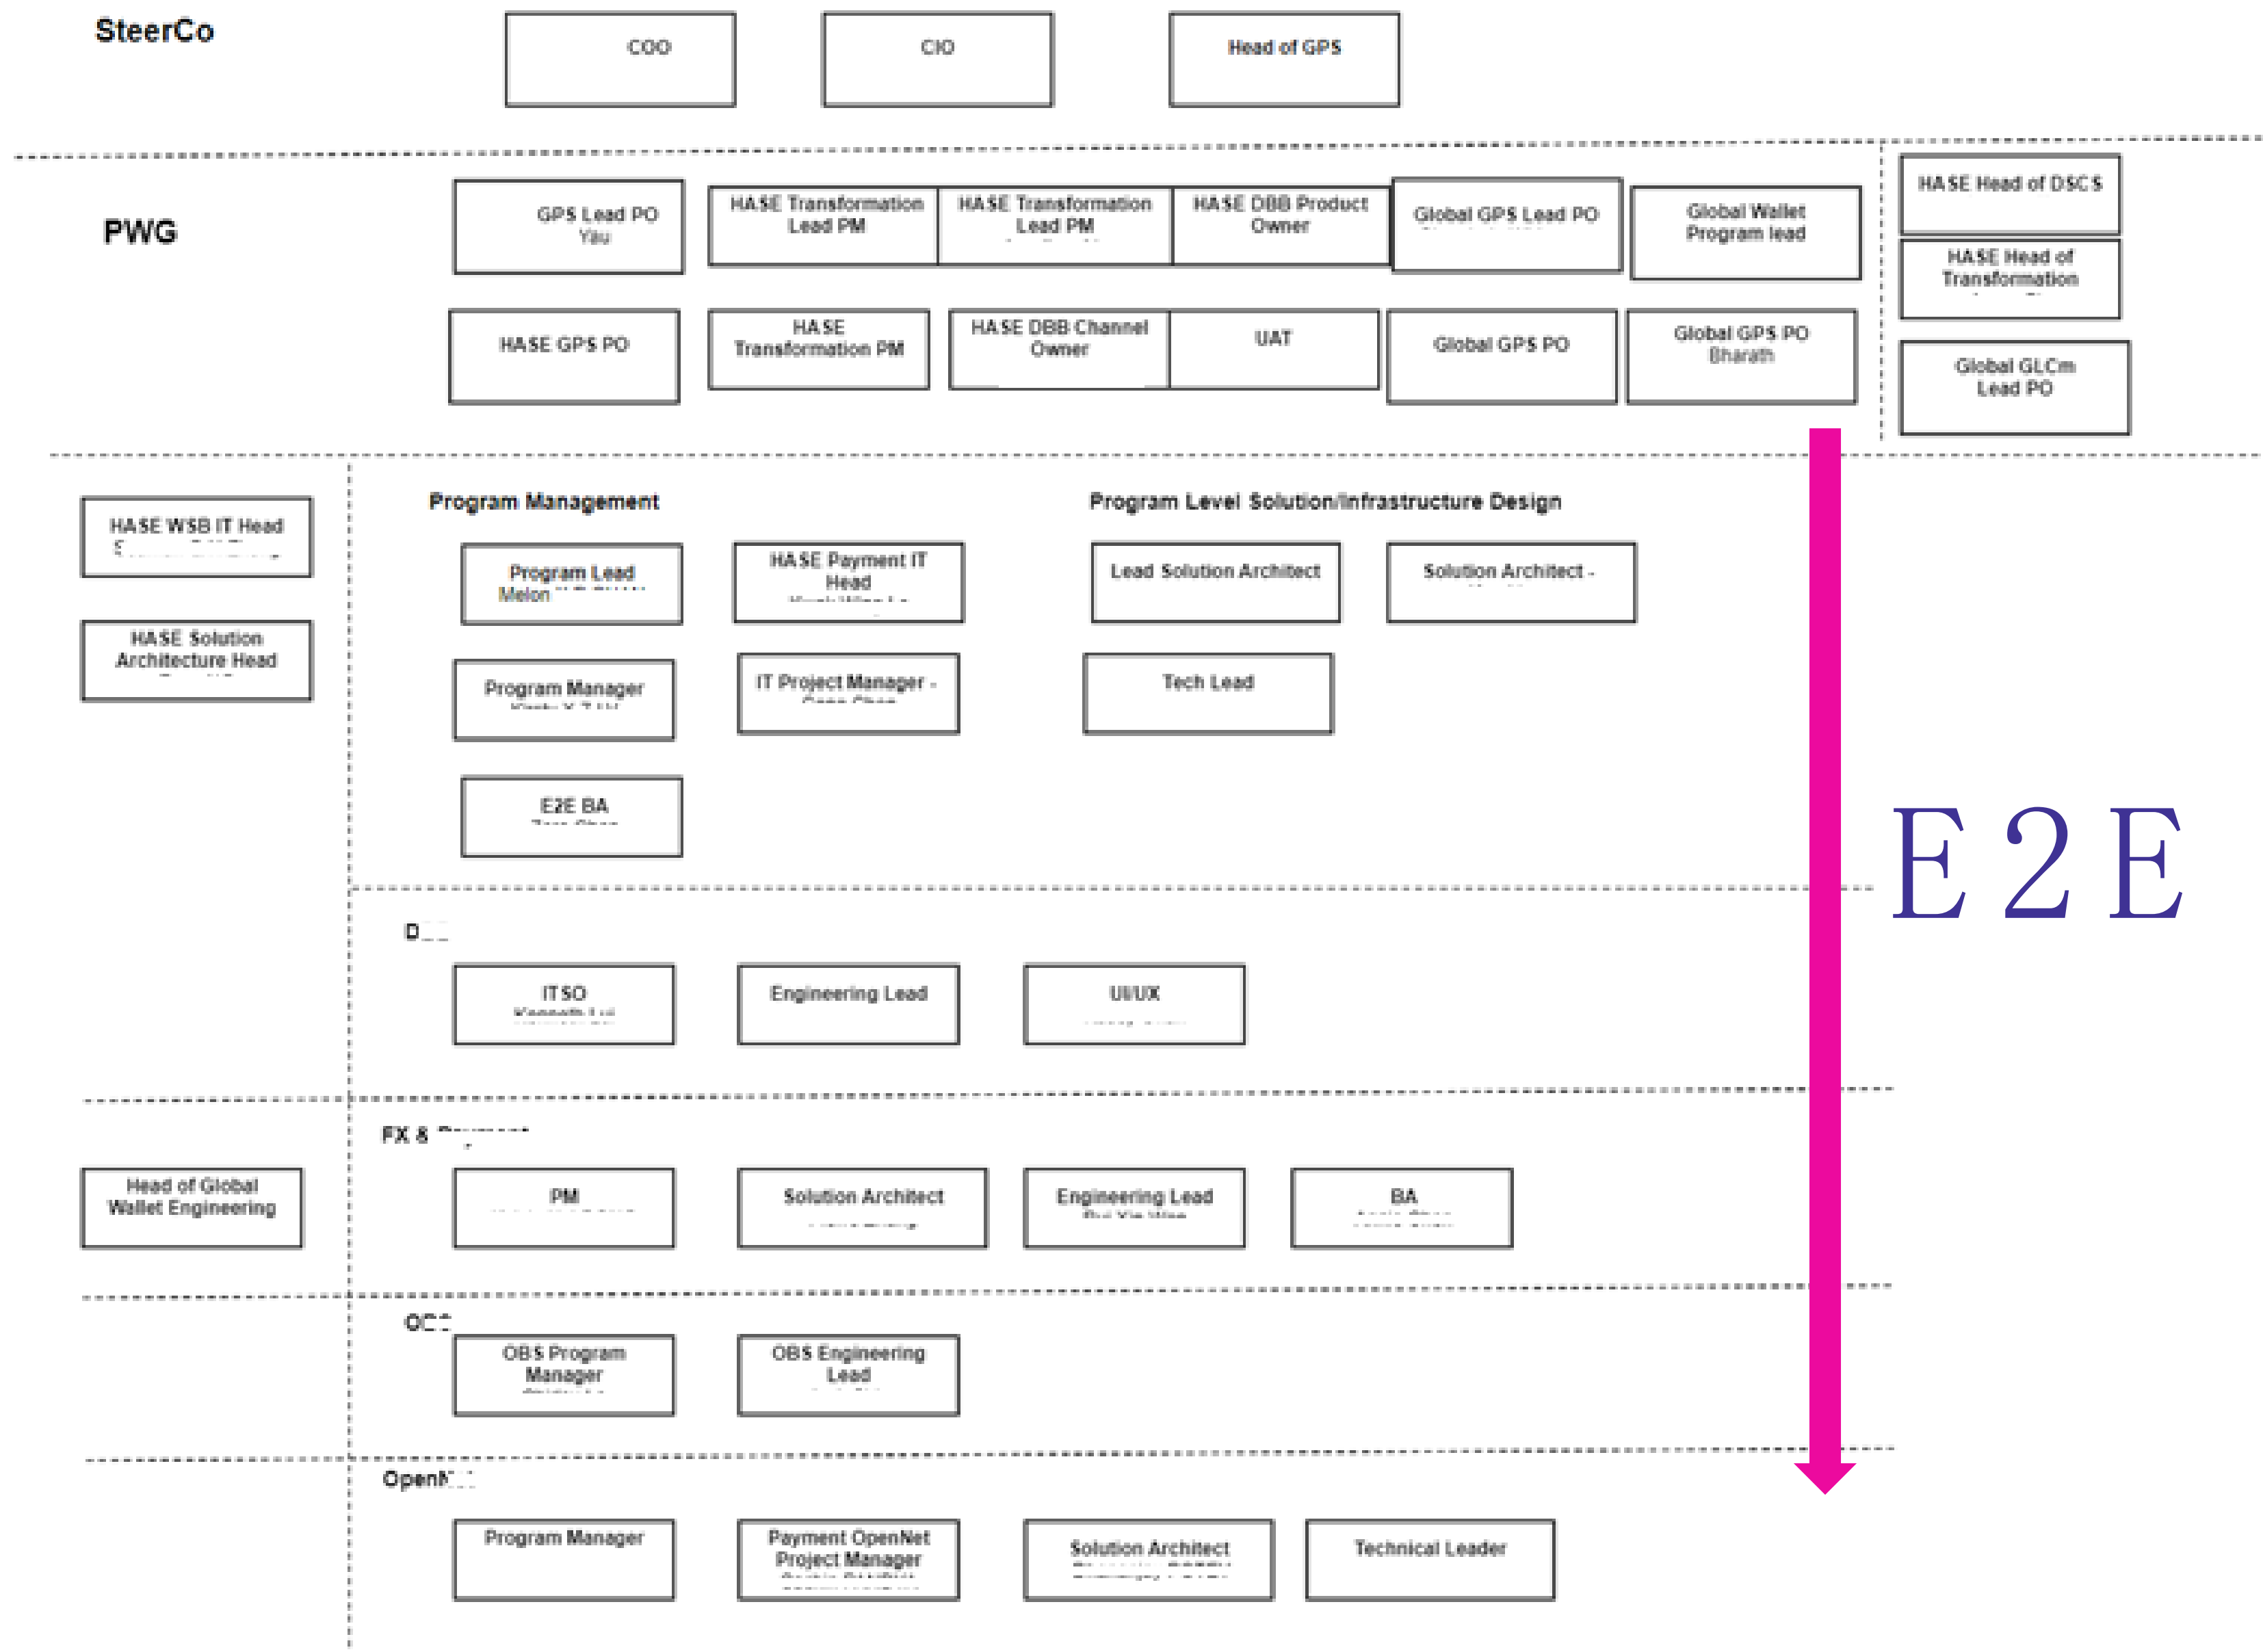

Imagine orchestrating global product development and deployment in over 16 key markets within just 6 months. It's a challenge I embraced head-on and conquered!

Join me as I reveal how we've harnessed the power of Scrum@Scale, Scaled Agile Framework (SAFe), and Behavior-Driven Development (BDD) to manage large-scale programs with over 10 internal and external teams.

Using **Scrum@Scale** and **SAFe** methods for large size program in the bank:

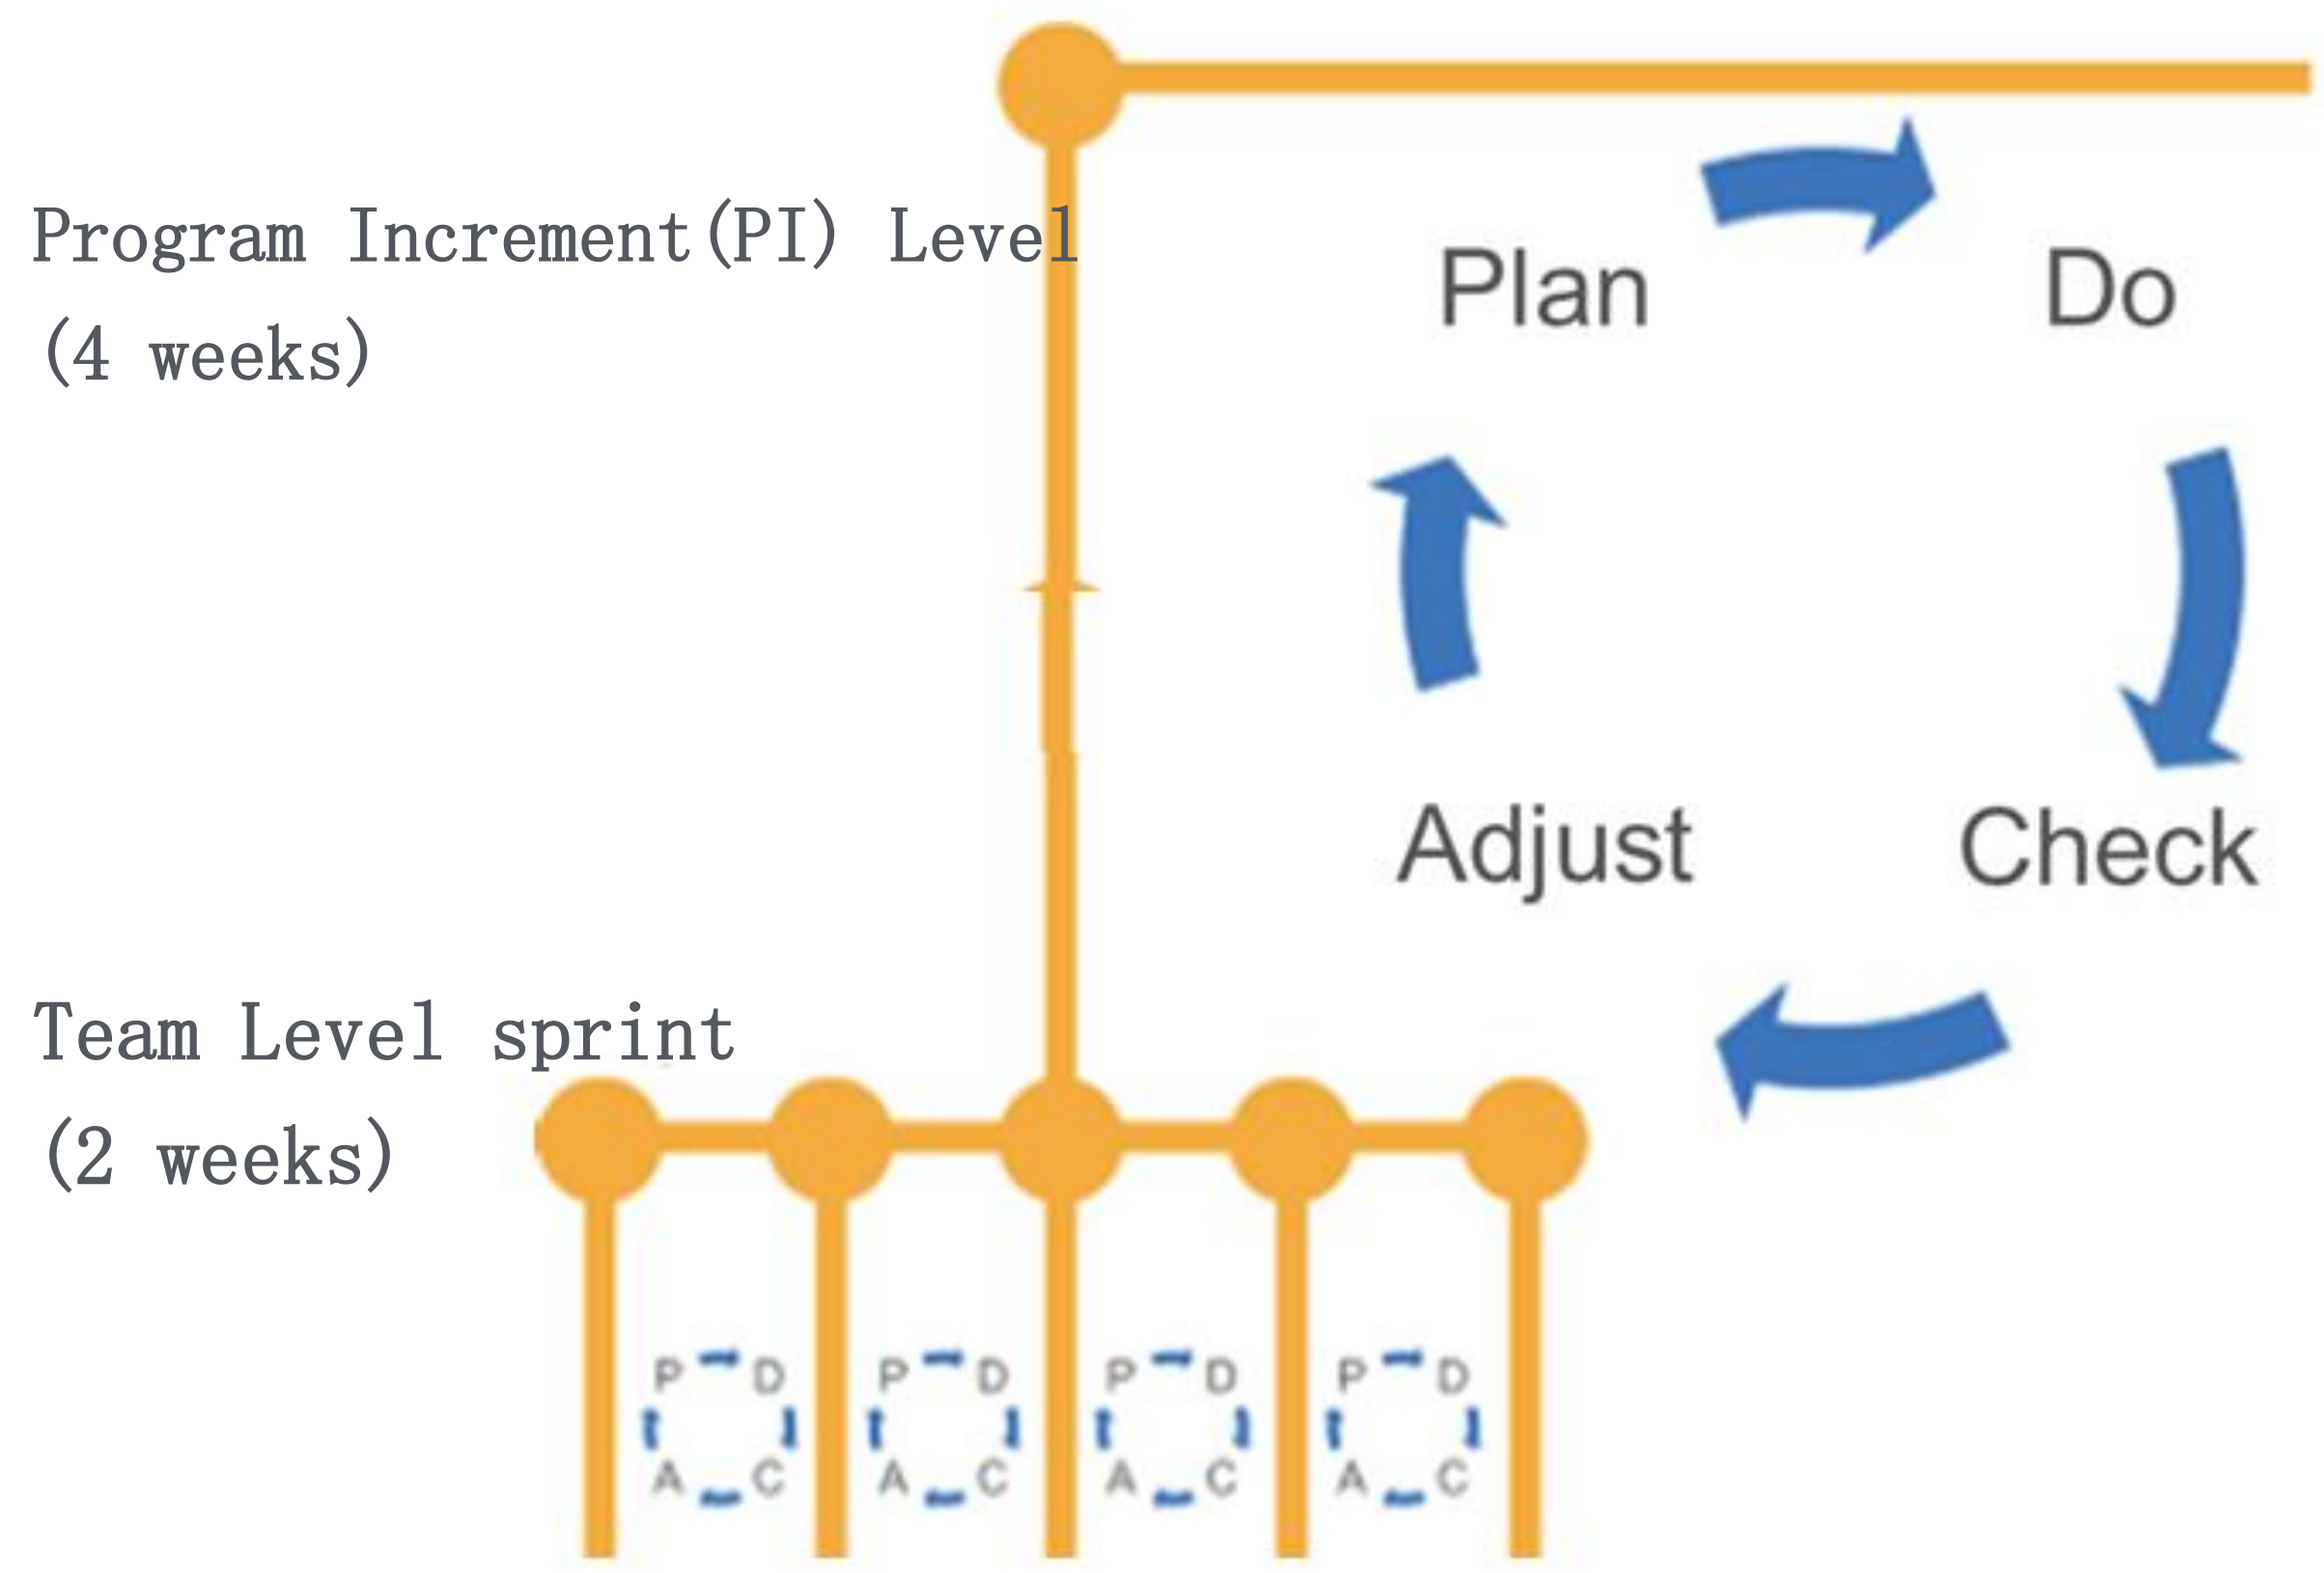

- **10** Teams for **6** months deliver cycle (5 external teams + 5 internal teams)
- **USD 1.8M** project size with **0** testing defect was raised during the cycle
- **30 minutes** PI Planning with 1 month per PI.
- **NO** additional test case via fully using user stories for test.
- CIO, Business and IT **Satisfaction** is received

User Story = Test Cases

User Stories = Test Cases

Gherkin Language helps describe end-to-end scenario of application behavior

```
As a credit cardholder,  
I want to use my credit card,  
So that I can pay my purchases.  
  
Scenario: Credit Cardholder Use the Card for Paying  
Given I am a credit cardholder  
When I pay with my credit card  
Then my credit card is accepted
```
